

**SECURITY VEHICLE SYSTEM, VEHICLE  
AND ASSOCIATED METHODS**

**Abstract of the Disclosure**

A collapsible security vehicle having a pair of security vehicle bodies is provided. The security vehicle preferably includes a pair security vehicle bodies collapsibly connected by a pair of security vehicle connectors so that the security vehicle can be positioned between an extended position and a collapsed position. Each of the pair of security vehicle bodies preferably includes a pair of security vehicle connector extensions and a pair of security vehicle connector receivers rotatably connected to the security vehicle connector extensions and positioned to receive each of the pair of security vehicle connectors. The security vehicle preferably includes a plurality of omni-directional wheels connected to each of the pair of security vehicle bodies so that the security vehicle can be readily positioned in a forward, rearward, lateral, and transverse direction.
